

Job Search & Personal Branding Toolkit — Ramya N

Target Role: Entry-Level / Fresher Full Stack Developer | **Target Companies:** Google, Microsoft

SECTION 1: ATS-Friendly Cover Letter

Dear Hiring Manager,

I am writing to apply for the Entry-Level Full Stack Developer position on your engineering team. As a final-year Computer Science student at Vidya Vikas Institute of Engineering and Technology (VTU), I have spent the past year building real, working web applications end to end — not just coursework exercises — and I am eager to bring that hands-on foundation to a team where I can learn from senior engineers while contributing from day one.

In my current Full Stack Development internship at Code-A-Nova, I am building responsive, multi-page web applications including an Inventory Management System and an Event Management System using HTML, CSS, and JavaScript. Both projects required me to design admin dashboards that surface key operational metrics — registration counts, stock levels, sales and purchase data — and to implement client-side interactivity for core management actions like add, update, and delete. The Event Management System alone is a 7-page responsive site (Home, About, Events, Registration, Contact, Login, Dashboard) with a full events catalog showing date, location, and seat availability, paired with a working registration flow. This mirrors exactly the kind of front-end ownership described in your job description: building responsive, user-friendly, interactive interfaces that real users depend on.

Alongside this, I am completing a Generative AI & Cloud Computing virtual internship with BharatCares (CSRBOX Group), in collaboration with AICTE and IBM SkillsBuild — a 6-week program covering prompt engineering, cloud computing, API architecture, and AWS deployment, culminating in a capstone AI project. This has sharpened my understanding of how front-end applications connect to backend services and cloud infrastructure, which directly supports your requirement for back-end familiarity with APIs and deployment principles.

On the technical side, I bring proficiency in HTML5, CSS3, and JavaScript (ES6+), working knowledge of React, and backend/database exposure through Node.js, MySQL, MongoDB, and Firebase — covering both the relational and NoSQL database familiarity your role requires. My coursework in Data Structures & Algorithms and Object-Oriented Programming gives me the fundamentals to write clean, maintainable code, and I use Git/GitHub for version control on all my projects. I have also completed targeted certifications — including Adobe Experience Cloud Suite (Infosys Springboard), Data Visualization (Forage), and Technology and GenAI Job Simulations (Deloitte and Forage) — to build practical exposure alongside my degree.

What draws me specifically to your team is the opportunity to work cross-functionally with design, QA, and product — something I have only simulated so far through coursework and internships, and am genuinely excited to do in a real production environment. I am a fast, self-directed learner: I built two full multi-page applications largely independently while managing two concurrent internships, and I actively seek out new tools and frameworks rather than waiting to be assigned them.

I would welcome the opportunity to discuss how my project experience and technical foundation can contribute to your engineering team. Thank you for your time and consideration.

Sincerely, Ramya N 6363307632 | ramyanagesh05@gmail.com | linkedin.com/in/ramya-n2918 | github.com/ramyanagesh29

SECTION 2: Recruiter Outreach Email

Subject: Fresher Full Stack Developer — Front-End Projects + Active Internships (Available for Full-Time/Entry Roles)

Hi [Recruiter's Name],

I'm Ramya N, a final-year Computer Science student (VTU, expected June 2027) currently completing two concurrent internships — a Full Stack Development internship at Code-A-Nova and a Gen AI & Cloud Computing internship with BharatCares/IBM SkillsBuild.

I've independently built two full multi-page web applications (an Inventory Management System and an Event Management System) using HTML, CSS, and JavaScript, each with a working admin dashboard and interactive management features. I also have working knowledge of React, Node.js, MySQL, and MongoDB.

I'm reaching out because I'm actively looking for entry-level Full Stack Developer opportunities and wanted to introduce myself directly. I'd love to be considered for any current or upcoming openings that match this profile, and I'm happy to share my resume, GitHub, or project walkthroughs at your convenience.

Could we set up a short call, or would it help if I sent over more details first?

Best regards, Ramya N 6363307632 | ramyanagesh05@gmail.com | linkedin.com/in/ramya-n2918 | github.com/ramyanagesh29

SECTION 3: Hiring Manager Email

Subject: Application for Full Stack Developer (Fresher) — Ramya N

Dear [Hiring Manager's Name],

I'm applying for the Entry-Level Full Stack Developer role on your team. I wanted to reach out directly because your job description's emphasis on cross-functional collaboration and hands-on ownership of both front-end and back-end work closely matches how I've approached my own projects.

Currently, I'm interning at Code-A-Nova, building responsive web applications end-to-end — including an Inventory Management System with a live admin dashboard for tracking stock, sales, and purchases. In parallel, I'm completing a Gen AI & Cloud Computing internship with BharatCares and IBM SkillsBuild, which has given me practical exposure to API architecture and AWS deployment — areas I know are relevant to how your team ships product.

I've attached my resume for your review, and my GitHub (github.com/ramyanagesh29) has both projects available to explore directly. I'd welcome the chance to speak about how I could contribute to your team.

Thank you for your consideration.

Best regards, Ramya N 6363307632 | ramyanagesh05@gmail.com | linkedin.com/in/ramya-n2918

SECTION 4: LinkedIn Connection Request

(Max 300 characters)

Hi [Name], I'm a final-year CS student building full-stack projects (Inventory & Event Management systems) while interning at Code-A-Nova and BharatCares/IBM SkillsBuild. Actively exploring Full Stack Developer roles — would love to connect and learn from your experience.

(268 characters)

SECTION 5: Referral Request Message

Hi [Name],

I hope you're doing well! I'm currently a final-year CS student actively applying for entry-level Full Stack Developer roles, and I noticed [Company] has an opening that closely matches my background — I saw it in [where you saw it, if known].

I'm currently interning at Code-A-Nova (Full Stack Development) and BharatCares/IBM SkillsBuild (Gen AI & Cloud Computing), and I've built two complete front-end applications with working dashboards using HTML, CSS, JavaScript, and I also work with React, Node.js, and MongoDB.

If you're open to it, would you be comfortable referring me for the role, or pointing me to the right person on your team? I'd be happy to send over my resume and GitHub link, and completely understand if now isn't the right time.

Thanks so much either way — I really appreciate it.

Best, Ramya

SECTION 6: Follow-Up Email

(Send 5 days after no response)

Subject: Re: Application for Full Stack Developer (Fresher) — Ramya N

Hi [Name],

I wanted to briefly follow up on my application/message from last week regarding the Full Stack Developer (Fresher) role. I understand you're likely reviewing a high volume of applications, so I just wanted to reaffirm my interest and make sure my details reached you.

Since reaching out, I've continued progressing in my Code-A-Nova internship (now building out the admin dashboard interactivity for the Inventory Management System) and I'm on track to complete my IBM SkillsBuild Gen AI capstone project shortly — happy to share it once it's done, if useful context for my application.

Please let me know if there's any additional information I can provide, or if it would help to schedule a short call.

Thank you again for your time.

Best regards, Ramya N 6363307632 | ramyanagesh05@gmail.com

SECTION 7: 30-Second Professional Introduction

"Hi, I'm Ramya — I'm a final-year Computer Science student, and right now I'm juggling two internships: one in full-stack web development at Code-A-Nova, where I'm building an Inventory Management System and Event Management System from scratch, complete with admin dashboards and interactive features. The other is a Gen AI and Cloud Computing program with BharatCares and IBM SkillsBuild, where I'm working on prompt engineering and AWS deployment for a capstone project. I work mainly with HTML, CSS, JavaScript, and React on the front end, and Node.js, MySQL, and MongoDB on the back end. I'm looking for a full-time Full Stack Developer role where I can keep building real products and learn from a strong engineering team."

SECTION 8: Top 10 Job Titles Best Suited for This Profile

1. Full Stack Developer (Fresher/Entry-Level)
 2. Front-End Developer (Junior)
 3. Junior Web Developer
 4. Software Engineer I / Associate Software Engineer
 5. React Developer (Entry-Level)
 6. Web Application Developer Trainee
 7. Junior UI Developer
 8. Software Development Engineer Intern → FTE Conversion Track
 9. Junior JavaScript Developer
 10. Graduate Engineer Trainee (GET) — Software
-

SECTION 9: Key Strengths Recruiters Will Notice

- **Two independently-built, full multi-page applications** (not tutorials or clones) — demonstrates initiative and end-to-end ownership rather than isolated coursework
 - **Concurrent internships in two distinct domains** (full-stack dev + Gen AI/cloud) — signals strong time management and breadth
 - **Admin dashboard design experience** — a practical, business-relevant skill (data-driven UI) beyond basic front-end work
 - **Full stack range at a fresher level** — HTML/CSS/JS/React on front end, Node.js/MySQL/MongoDB/Firebase on back end
 - **Active, current certifications** (2026) from recognized programs — Infosys Springboard, Forage, Deloitte — showing continuous, recent learning
 - **Direct alignment with AICTE/IBM SkillsBuild**, a credential recruiters at large tech firms recognize for structured technical rigor
-

SECTION 10: Skill Gap Analysis

Current Strengths

- Front-end fundamentals: HTML, CSS, JavaScript, responsive multi-page design
- Working knowledge of React
- Backend/database exposure: Node.js, MySQL, MongoDB, Firebase
- CS fundamentals: DSA, OOP
- Git/GitHub version control
- Early cloud/API exposure via AWS and Gen AI internship

Missing Skills (relative to target JD — Google/Microsoft-level Full Stack roles)

- No listed experience building or consuming RESTful APIs directly (JD explicitly requires this)
- No mention of testing/debugging frameworks (e.g., Jest, Mocha, Postman)
- No deployed/live project links or hosting experience (Vercel, Netlify, AWS, Azure)
- No CI/CD or DevOps basics
- No system design or data structures applied at scale (competitive programming, LeetCode-style proof points)
- No Python framework experience (Django/Flask) despite Python listed as a language
- No formal open-source or hackathon participation on record

Recommended Learning Roadmap

1. **Next 4 weeks:** Build one RESTful API from scratch (Node.js + Express) and connect it to one of your existing front-end projects (Inventory or Event Management System) — turns both into full-stack, not front-end-only, projects
2. **Next 6 weeks:** Deploy both existing projects live (Netlify/Vercel for front end, Render/AWS for back end) and add the live links to GitHub and resume
3. **Ongoing:** Solve 3–5 DSA problems/week on LeetCode or HackerRank, focused on arrays, strings, and basic graph/tree problems — Google and Microsoft interviews screen heavily on this
4. **Next 2 months:** Learn basic testing (Jest for JS) and add at least one test suite to an existing project
5. **Before applying to Google/Microsoft specifically:** Complete one small personal project using a cloud platform end-to-end (tying back to your AWS/Gen AI internship) and document it as a case study on GitHub/LinkedIn

SECTION 11: Personal Brand Summary

Unique Value Proposition A final-year CS student who doesn't just study full-stack development — she ships it. While most peers show single-page course projects, Ramya has independently built two complete multi-page applications with functioning admin dashboards, while simultaneously completing two structured industry internships spanning both web development and Gen AI/cloud computing.

Professional Positioning Statement "Full-stack developer in training, with proven experience building complete, functioning web applications and a fast-expanding foundation in cloud computing and AI-integrated development — ready to bring initiative and full ownership to a professional engineering team."

Recruiter Headline Final-Year CS Student | Full Stack Developer
(HTML/CSS/JS/React/Node.js) | Building Real Products, Not Just Projects | Gen AI & Cloud Computing (AICTE/IBM SkillsBuild)

SECTION 12: Interview Talking Points

Most Impressive Achievements

- Built two complete, multi-page, production-style web applications (7-page Event Management System; multi-page Inventory Management System) independently, each including a functioning admin dashboard
- Successfully managing two concurrent internships in different technical domains (full-stack dev and Gen AI/cloud) alongside final-year coursework
- Completed four recognized industry certifications within 2026 alone, showing consistent, recent upskilling

Key Stories to Discuss

1. **The Inventory Management System build:** Walk through the decision-making behind the admin dashboard — what metrics you chose to surface (stock, sales, purchases) and why, and how you implemented add/update/delete actions in JavaScript. Good story for "tell me about a project you're proud of."
2. **Balancing two internships simultaneously:** A strong answer for "how do you manage competing priorities" — be ready to describe your actual weekly structure/time allocation.
3. **The Gen AI capstone project (once complete):** Prepare a short narrative on what the capstone solves and what you learned about prompt engineering and AWS deployment — useful for "how do you stay current with new technology."

Areas Recruiters Are Likely to Ask About

- Whether either project has a live/deployed version (be ready with an honest answer — currently front-end/local; mention your deployment plans if not yet done)
- Backend depth: since projects are described as front-end applications, expect questions probing how much backend/API work you've actually done versus planned — answer honestly and pivot to your Node.js/MySQL/MongoDB coursework and internship exposure
- Data structures & algorithms fluency — expect at least one live coding question; be ready to think aloud
- Why Google/Microsoft specifically — have a genuine, specific answer ready (avoid generic "innovation" language) tied to their engineering culture or a product you actually use

- Availability/graduation timeline — be upfront that you graduate June 2027, and clarify whether you're seeking an internship-to-full-time track or an immediate entry-level role
